

Polyester Capacitors Filmite "E", ORANGE DROP®, Radial Lead

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55°C to + 85°C.

To + 105°C when working voltage is reduced to 70% of + 85°C rating; to + 125°C when working voltage is reduced to 50% of + 85°C rating.

Insulation Resistance: After a 2 minute charge at rated voltage or 500 V, whichever is less.

At + 25°C: 100,000 Megohm for C ≤ .25 Microfarads.

25,000 Megohm - Microfarads for C > .25 Microfarads.

At + 85°C: 10,000 Megohm for C ≤ .15 Microfarads.

1500 Megohm - Microfarads for C > .15 Microfarads.

At + 105°C: 1500 Megohm for C ≤ .17 Microfarads.

250 Megohm - Microfarads for C > .17 Microfarads.

At + 125°C: 200 Megohm for C ≤ .13 Microfarads.

25 Megohm - Microfarads for C > .13 Microfarads.

Capacitance, Tolerance and Dissipation Factor:

Capacitors shall be measured at a frequency of 1000Hz @ + 25°C or else be referred to measurements made at that frequency and temperature. The maximum dissipation factor shall be .75%.

FEATURES

- Utilizes minimum area where printed wiring board space is most important
- Wound from PETP polyester film and thin gauge foil under carefully controlled atmospheric conditions
- Protected against moisture by a conformal coating of epoxy
- Specifically designed for printed wiring board applications
- Widely used in computers, instrumentation and telecommunications equipment
- 100 VDC through 600 VDC, may be operated up to + 125°C with proper derating

Dielectric Withstanding Voltage: Capacitors shall withstand a DC potential of 250% of rated voltage applied between terminals for not more than 5 seconds. The test voltage must be applied and discharged through a resistor of 1 ohm per volt.

Humidity Test: Condition capacitors with no voltage applied for 72 hours @ 95% relative humidity and + 75°C. Remove capacitors from humidity chamber, wipe surface dry of moisture and dry in circulating air for 4 hours. Measure insulation resistance after a 2 minute charge @ + 25°C and rated voltage or 500 VDC, whichever is less. Minimum product of insulation resistance and capacitance shall be 5000 Megohm - Microfarads after test but need not exceed 10,000 Megohm. Not more than one failure allowed in 12 units tested.

DC Life Test: Capacitors are capable of withstanding a 500 hour life test @ + 85°C @ 150% of rated working voltage. After test, capacitance shall not have changed by more than 5% of initial value, insulation resistance shall not have decreased by more than 50% of the initial limit and dissipation factor shall not have increased to more than 1%.
